

ACCELERATE AND FACILITATE YOUR MIGRATION WITH VMWARE CLOUD ON AWS

A rapidly shifting business environment can bring about the need for stability and predictability.

Aging on-site infrastructure, hardware replacement, contract expiry, or expanding needs can be catalysts for a move to the cloud.

Deciding to migrate to the cloud carries with it a host of relevant questions:

- *How is my current model adapted to the cloud?*
- *How fast can I configure and commission my*
- *setup?*

More fundamentally, is it best to reconfigure my existing environment or to ensure my applications remain stable and functional?

Today, data centre migration is much easier thanks to VMware Cloud on AWS, the direct result of an innovative joint venture between Amazon Web Services and VMware.

Cofomo's cloud VMware Cloud on AWS migration services rely on our fully certified team and can benefit from AWS's Migration Acceleration Program (MAP).

Leveraging the Potential of AWS's Migration Acceleration Program

Cost has traditionally been the deciding factor when opting to move to the cloud. Increasingly however, clients appreciate the strategic value of AWS migration and realize that it goes beyond the savings generated by minimizing on-site infrastructure.

Cofomo provides expert guidance to help you realize:

- Reduced costs
- Increased team productivity
- Improved infrastructure security and operational resiliency
- Data centre consolidation
- Digital transformation and new technology implementation.

AWS MAP: A Three-Phase Approach

The *MAP* (Migration Acceleration Program) uses proven methods, tools, training, and incentives to reduce the risk and cost associated with significant cloud migration and works towards creating a solid operational foundation for Cofomo customers.

AWS MAP is designed to automate and accelerate common migration scenarios, so you can focus on innovation, moving your business forward, and not on managing and maintaining outdated infrastructure.

MAP's Three Phases

Assessment: We assess your migration readiness, identify and evaluate strengths, opportunities for improvement, and potential business benefits.

Mobilization: It begins with a detailed migration planning phase. Here, factors such as data migration, system migration, integration with other systems, accessibility, and the operation of migrated environments are factored in.

Migration and Modernization: Once assessment and migration strategy development are complete and client-approved, the move to cloud is executed and all migrated systems are delivered to operations teams.

The AWS Migration Acceleration Program understands the bottom line and so financial incentives help offset upfront expenses and are based on anticipated recurring annual revenue.

All of which means...

Cofomo's value-added VMware Cloud on AWS presents significant advantages to clients hoping to make a rapid, and near-seamless move to the cloud. Our resources, experience and expertise mean this is second-nature to us.

ABOUT COFOMO

Established in 1995, Cofomo is a Canadian leader in information technology (IT) and business consulting services, which translates today into the acceleration of client companies' digital transformation.

Its solutions cover the full range of business needs, including strategy, innovation, agility, intelligence, security, and cloud computing.

Its unique expertise is delivered through flexible on-demand project and talent delivery models.

A team of over 3,000 professionals provides these services to large private and public sector organizations, mostly located in Eastern Canada. This team is supported by a high-performance, lean organization and a state-of-the-art digital ecosystem to communicate with clients, acquire and manage talents and projects, and deliver the full services of the new digital economy.
